PROTECTION**

WORKING GROUP 1: BIODIVERSITY MANAGEMENT AND PROTECTION

THE MEDITERRANEAN CONTEXT

Considered a biodiversity hotspot, the Mediterranean basin includes a semi-enclosed sea that is surrounded by more than 20 countries, each of them with different levels of resource use, and protection and management practices. There are 1231 Marine Protected Areas (MPAs) and other effective area-based conservation measures (OECMs) in the Mediterranean covering 179,798 km², a surface of 7.14% under legal designation, including only 0.04% of fully and strongly protected areas¹. Most of these are not effectively managed due to low human, material and financial capacities. These MPAs also vary widely in size, purpose and management depending on various factors.

However, they all face the common increasing pressures of growing population rates, changing climate, rapid economic development, high competition across regions, and unsustainable consumption and production patterns. Climate change and marine litter are some of the emerging concerns to Mediterranean ecosystems and biodiversity putting key ecological areas in need of urgent protection.

THE WORKING GROUP AND ITS OBJECTIVES

The MED Biodiversity Protection Community is seeking solutions to bridge science, practice and policy to address priority threats through an action roadmap for its working group 1 which focuses on protected areas, namely MPAs, and biodiversity management (WG1). After consultation with members of the MED Biodiversity Protection Community and the advisory board, the policy landscape targeted by this group reaches different levels of environmental policy, management practices and networks converging in the region and has been defined as follows:

¹Assessment on the Status of Mediterranean Marine Protected Areas (MPAs) and Other Effective Area-based Conservation Measures (OECMs). 2016. MedPAN and SPA/RAC. Available in: <http://medpan.org/marine-protected-areas/mediterranean-mpas/>

Project co-financed by the European
Regional Development Fund

- UN Environment/MAP SCP/RAC
- Union for the Mediterranean (UfM)
- Task Force on Environment and Climate Change

For a full picture of the MED Biodiversity Protection Community analysis of relevant policies and instruments, see [here](#)

Other stakeholders to involve in the activities and dissemination of key messages include the overall Interreg MED Community; Joint Secretariat; Axis 4 - PANORAMED and other horizontal and modular projects active in protected areas and biodiversity related issues, such as BlueIslands and Destimed among the MED Sustainable Tourism projects. Working Group 1 aims to increase understanding, knowledge and awareness of multiple environmental threats and promote best practice guided by Ecosystem Based Management (EBM) tools as a response to address the cumulative pressures and impacts in protected areas, focusing on functional ecosystem units.

In brief, WG1 will work to:

- Monitor and promote standardised sampling methodologies and management tools to allow for a common regional approach to address major environmental pressures, including marine litter (ML) and climate change (CC), and build the capacity of protected areas to tackle cumulative impacts.
- Collect data to integrate them into the MED Biodiversity Protection Knowledge Platform and regional databases for protected areas at Mediterranean level (see MAPA-MED database led by MedPAN and SPA/

RAC), and ultimately, identify environmental risks and management priorities in need of urgent action at different regional scales.

- Provide added value knowledge by integrating results from modular projects (MPs), spatial information and indicators to showcase current efforts to policy-makers and stakeholders in pilot sites.
- Promote the integration of the Community knowledge into Marine Spatial Planning (MSP) and provide transferable best practices among protected areas and at transboundary level.

The main Interreg-MED modular projects currently involved in WG1 are:

- **ACT4Litter:** Development of a decision making tools and pilot actions towards joint measures to address marine litter in Marine Protected Areas in the Mediterranean
- **AMAre:** Actions for Marine Protected Areas, through the development of shared methodologies and spatial tools to concrete MSP applications for managing protected areas.
- **MedSeaLitter:** Common methodologies for monitoring floating macro litter and biodiversity impacts in the Mediterranean Sea.
- **MPA-Adapt:** Building resilience and adaptation to Climate Change impacts in Marine Protected Areas.
- **POSBEMED:** Sustainable management of Posidonia oceanica beaches and dunes in the Mediterranean coastal region.

- **PlasticBusters MPAs:** Actions that address the whole management cycle of marine litter, from monitoring and assessment to prevention and mitigation.
- **PHAROS4MPAs:** Regional integrated framework for recommendations on the necessary practical collaboration between Mediterranean MPAs and the maritime sectors, as well as to evaluate the environmental risks of the Blue Growth strategy.

Other projects in the community might contribute to the WG1 activities according to their scope and planned actions (CONFISH, ECOSUSTAIN, FISHMPABLUE2, WETNET).

MILESTONES

The working group on Biodiversity Management will be showcasing its work during the next two years particularly through EU and Mediterranean events and publications such as:

- MedPAN article and updated catalogue on tools for protected area management - summer 2018 / autumn 2019
- UNEP MAP State of the Environment and Development (SOED) publication- 2019

An online [shared calendar](#) of events is available and regularly updated with opportunities to participate and organize joint activities.

International events	Events in EU/MED area		WG1 partnership actions
Union for the Mediterranean events 2018/2019	Interreg MED and PANORAMED 2018/2019	2018	Promotion of environmental protection as priority
	DG MARE MSP events 2018 onwards		Presentation of PANACeA and its platform capitalising on project results
	18-19 April – “MADE in MED”, Rome		Exhibition and participation in the panels
5th International Marine Conservation Congress, Malaysia, 24-29 June 2018	16-18 May – PANACeA in Montenegro		Factsheet and sub-action plans for WG1 validation: EBM tools, Marine Litter and Climate Change
			Start compilation of data for the PANACeA platform 2018/2019
			Social surveys on main transboundary impacts and management challenges in demonstration EBSAs. Draft Marine Spatial and Action Plan for impact management in 2 demonstration EBSAs.
			Review document /factsheet on Marine Litter measures and tools for management: MPAs perspective
			Expert Working Group and Consultation workshops on EBM in 2 priority EBSAs.
			Policy document/Technical paper/factsheet on climate change adaptation for MPAs
			Policy document/Technical paper/factsheet on marine litter pressures in the Mediterranean Sea (initial)
		Technical document/factsheet on marine litter impact on aquatic life (includes maps)	
		Position paper and Synthesis Prospectus identifying priority management activities in 4 priority EBSAs in the Mediterranean	
		CBD Workshop on challenges to EBM of Marine Litter, Climate Change impacts in EBSAs in the Mediterranean	
		2019	
			Policy review/Factsheet/Report on measures to address ML management in MPAs (continuation)
Ramsar COP13 – Dubai, 21-29 Oct. 2018			
	MSFD Technical Group Marine Litter		
	October - MedPAN Annual workshop		
	Barcelona Convention Mediterranean meeting of the ML Cooperation Platform, October 2018		
CBD COP 14 – Egypt, 10-22 Nov. 2018	Nov-Dec - PANACeA Mid Term Review in Brussels		
	Meeting of the Ecosystem Approach Correspondence Group CORMON on Marine Litter Monitoring, March 2019		
	Apr-May - PANACeA in Rome
