

Plan Bleu pour l'environnement et le développement en Méditerranée

What regional process for the monitoring of MSSD 2016-2025 implementation?

Jean-Pierre GIRAUD
Indicators and Information System
Programme Officer

**Workshop on MSSD 2016-2015 Monitoring
Plan Bleu**

March 30-31 2016

A more efficient process

Most of the MSSD 2005 indicators were extracted from international databases and from specific studies.

For a more efficient monitoring, there is a need to establish a regional process involving :

- **The international institutions**
- **The national institutions**
- **Local institutions**
- **Other data providers (NGO, Private, Public, ...)**

Restructure Plan Bleu activities

- Reorganise the Plan Bleu activities around **a common data/information core set** useful for the next regional exercises/reports : MSSD 2016-2015 monitoring, SoED report 2019, MED 2050.
- Plan a first **significant** phase on data/information in all the projects/activities in order to increase this core set.
- Strengthen the cooperation and data sharing **with the MAP components**.
- Strengthen the cooperation with the UN agencies and international bodies : in order have a **better consideration/visibility of the Mediterranean region**

A more pragmatic approach

As proposed for the SDG indicators, the Indicator/information needed for the MSSD 2016-2025 monitoring need to be classified in 3 tiers:

1. **Tier I:** an established methodology exists and data are already widely available;
2. **Tier II:** a methodology has been established but for which data are not easily available;
3. **Tier III:** an internationally agreed methodology has not yet been developed.

To go further

- Process with the **Tier I** indicators: publish methodological factsheets, gather available information and develop Mediterranean factsheets/dashboards.
- Test the **Tier II** indicators in some countries in link with the NSSD or local SD : methodological factsheets, organise national workshop/workgroup with the national institutions.
- Promote the development of the methodology for the **Tier III** indicators with R&D stakeholders and test in some case studies

How to proceed for the population of the indicators :

Monitoring process

Short term

Long term

the best available
data (national
and international
)

National
compilation and
reporting

Global modelling
or estimates

Extend the sources of data and promote data sharing

Not only data from traditional and official sources.

Develop the use of data from research institutions /universities

The use of remote sensing and spatial data

Reinforce the cooperation with existing network UNEP/Live ?

Based on existing or future project (SEIS II, ...)

Use data from new technology (crowd sourcing, GPS/mobile information, ...)

**Promote data sharing and develop/use existing platform
(Infomap system, SEIS, ..)**

How to reinforce the involvement of the countries?

Who would be involved in the monitoring process in the Med countries at the national level?

MoE, Observatories, MCSD Members, Focal Points

How to convince the contracting parties and stakeholders :

1. To contribute to the MSSD monitoring,
2. To provide or to share data and information for the indicators
3. To provide some resources (contact person, national activities, ...)

How to organise this involvement at the national and subnational levels ?

***Without any reporting obligations on the MSSD monitoring
In using as much as possible existing reporting system.***
